The Future of Carpet Tile Installation

StaticSmart™ and the LokDots™ adhesive system.

So What is It?

LokDots is an innovative new pressure sensitive adhesive product designed for use exclusively with EcoWorx® backed carpet tile, including StaticSmart carpet tile. Hands down, LokDots is a game-changer: no other dry adhesive system works as efficiently or as easily. The LokDots system will reduce waste, save time and lower costs on installations. A better alternative to using wet adhesive, it features an intuitive, easy to use lightweight applicator. LokDots can be applied in demanding installation environments such as high moisture areas (up to 10 lbs., 95% humidity) or high alkalinity (12pH), occupied spaces, and can be installed on ALL subfloors.

“Hands down, LokDots™ is a game-changer.”

*No more open drying times, trowel notch size confusion or vapor issues
- just roll out the LokDots and stick the tiles down.*

Why Use it?

LokDots is a more efficient installation, which increases productivity and reduces costs. Durable applicator requires no maintenance and little training. It eliminates the mess, curing time and odors that are associated with wet adhesives, allowing for immediate occupancy and making it ideal for occupied spaces. LokDots™ can be installed over concrete, VCT, VAT, cutback, raised access floors, pressure sensitive and multipurpose adhesive, or wood. In addition, LokDots™ offers easy removal: no scraping or sanding over required.

Other Benefits

Reduced cost: 2 cases of LokDots is equivalent to a pallet of adhesives. 1,680 lbs. of adhesive is equivalent to 70 lbs. of LokDots., reflecting a 95% material reduction. This material reduction translates into less expense for installation and real cost savings.

The LokDots system works with all StaticSmart Mission Critical and LAN Series static control carpet tile. It is a less expensive, easier installation option than conductive adhesives and represents a major step forward in carpet tile installation.

Call (978) 276-0820 today to order your LokDots adhesive system to use on your next installation and start saving time and money today.

How LokDots™ compares with Pressure Sensitive Adhesive for conductive floor tiles.

	LokDots™ Adhesive System	Pressure Sensitive Adhesive
OCCUPIED SPACE INSTALLATION	Ideal	Not Recommended
HIGH MOISTURE APPLICATIONS	Ideal 10 lbs. - 95% rH	Not Recommended
ALKALINITY	12 pH	9 pH
OPEN ADHESIVE TIME	None	30 - 60 minutes
INTERFERENCE WITH SUBFLOOR	None	Old adhesive remains on subfloor
FLOOR PREP	Level, clean of debris	Level, clean of debris
FUTURE FLOOR PREP	None, LokDots come up with the tile when removed	Leveling required, possible removal of old adhesive
EASE OF USE AT PERIMETER AND INTERIOR CUTTING	Easy	Easy
SHIFTING	Product adhered to floor, negligible shifting	None
VOCs	Virtually no VOCs	Low
WARRANTY	Lifetime Limited Commercial Warranty	One year Commercial Warranty
CERTIFICATIONS	Green Label Plus & Cradle to Cradle	Green Label Plus
